

Input Matters in SLA

SECOND LANGUAGE ACQUISITION

Series Editor: Professor David Singleton, *Trinity College, Dublin, Ireland*

This series brings together titles dealing with a variety of aspects of language acquisition and processing in situations where a language or languages other than the native language is involved. Second language is thus interpreted in its broadest possible sense. The volumes included in the series all offer in their different ways, on the one hand, exposition and discussion of empirical findings and, on the other, some degree of theoretical reflection. In this latter connection, no particular theoretical stance is privileged in the series; nor is any relevant perspective – sociolinguistic, psycholinguistic, neurolinguistic, etc. – deemed out of place. The intended readership of the series includes final-year undergraduates working on second language acquisition projects, postgraduate students involved in second language acquisition research, and researchers and teachers in general whose interests include a second language acquisition component.

Full details of all the books in this series and of all our other publications can be found on <http://www.multilingual-matters.com>, or by writing to Multilingual Matters, St Nicholas House, 31-34 High Street, Bristol BS1 2AW, UK.

Contributors

Benedetta Bassetti, Laurea, University of Rome; MA, Birkbeck, University of London; PhD, University of Essex, is a Visiting Research Associate at the Institute of Education, University of London. She is interested in the acquisition and use of additional languages and writing systems. She is founding co-editor of the journal *Writing Systems Research*.

Werner Bleyhl, PhD University of Tübingen, is professor emeritus at the University of Education Ludwigsburg, Germany. He was a Fulbright scholar in 1980. His research and numerous publications focus on foreign language learning and teaching of adults and young learners, taking into account the research findings of developmental psychology, language acquisition and brain research. Bleyhl advocates a broad and flexible approach to language teaching which should – both theoretically and practically – come to grips with the principles of non-linearity and self-organization that so clearly determine the complex processes of language learning.

Ocke-Schwen Bohn, Dr.phil. Kiel University, is professor and Chair of English Linguistics at Aarhus University. With funding from the German DFG, the Danish SHF/FKK, and in collaboration with American, Canadian, and Australian colleagues, Bohn's research focuses on cross-language and second language speech perception, foreign-accented speech, and infant speech perception.

Rikke Louise Bundgaard-Nielsen, MA, Aarhus University, Denmark, is currently a PhD student at MARCS Auditory Laboratories, University of Western Sydney, Australia. Her research focuses on second language speech perception and production, as well as native and cross-dialect speech perception.

Kees de Bot graduated from the University of Nijmegen in General Linguistics and Applied Linguistics. His research concerns a number of topics including foreign language attrition, language and dementia in multilingual settings, maintenance and shift of minority languages and the psycholinguistics of bilingual language processing, early and late forms of bilingual education and immersion and the application of Dynamic Systems Theory in SLA and multilingualism.

He is Chair of Applied Linguistics and director of the Research School for Behavioral and Cognitive Neurosciences (BCN) at the University of Groningen.

Nel de Jong, MA Free University Amsterdam; PhD, University of Amsterdam is currently an assistant professor at Queens College of the City University of New York. De Jong's work focuses on second language acquisition and aims to characterize the changes in knowledge and processing mechanisms that are brought about by specific teaching methods.

James E. Flege, PhD retired in 2006 from the Speech & Hearing Division, University of Alabama. For 25 years he conducted research examining the development of speech in a second language under the auspices of grants from the National Institutes of Health (NIH). The results of this research is available at www.jimflege.com

Stephen Krashen is best known for developing the first comprehensive theory of second language acquisition, introducing the concept of sheltered subject matter teaching, and as the co-inventor of the Natural Approach. He has also contributed to theory and application in the areas of bilingual education, and reading. He was the 1977 Incline Bench Press champion of Venice Beach and holds a black belt in Tae Kwon Do. His current books are *Summer Reading: Program and Evidence* (with Fay Shin, published by Allyn and Bacon), *English Learners in American Classrooms* (with Jim Crawford, published by Scholastic), and *English Fever* (Crane Publishing Company, Taipei).

Wander Lowie graduated from the University of Amsterdam in English and speech science. His PhD research focused on the acquisition of inter-language morphology. He is currently employed at the University of Groningen, where he works in the Departments of English and Applied Linguistics. His research has focused on the development of morphology, phonology and the lexicon in a second language, more recently from the perspective of dynamic systems theory. Together with Marjolijn Verspoor, Kees the Bot he has published several articles on the application of dynamic systems theory to second language development in, among others, *Bilingualism and The Modern Language Journal*.

Alene Moyer is Associate Professor of Germanic Studies and Second Language Acquisition in the School of Languages, Literatures and Cultures at the University of Maryland, College Park, where she teaches graduate and undergraduate courses in sociolinguistics, second language acquisition, German linguistics, and foreign language teaching methods. Her research explores the experiential and socio-psychological factors relevant to accent in a second language. She is currently working on a book on the social implications of foreign accent in the USA.

Andreas Rohde, PhD and German 'Habilitation', Kiel University, is a professor in linguistics and second language teaching at Cologne University. Rohde's research focuses on second/foreign language acquisition in bilingual programmes at kindergarten and primary school level.

Anja K. Steinlen, University of Kiel, PhD University of Aarhus, is currently working as a researcher in a COMENIUS "Lifelong Learning Project" at the English Department, University of Kiel. Her interests lie in psycholinguistics and her research focuses on the acquisition of native and nonnative sounds by children and adults as well as on the acquisition of nonnative grammatical and lexical structures in an immersion kindergarten and school context.

John Stephenson, BA, University of Manchester; MA, University of Durham, teaches English and linguistics at Mie University, Japan. His research interests include second language acquisition of phonology and comprehension-based language-learning methodologies.

Bill VanPatten (PhD, University of Texas) is Professor and Director of the Graduate Program in Applied Linguistics and Second Language Studies at Texas Tech University. He has published widely in the areas of input processing and processing instruction. He is currently conducting research on ambiguity resolution with second language learners, looking specifically at the issues of transfer and ultimate attainment. He also writes fiction and sometimes performs standup comedy.

Marjolijn Verspoor (MA Louisiana State University; PhD University of Leiden) is Senior Lecturer in the Departments of English Language and Culture and Applied Linguistics at the University of Groningen. Her main research interests are second language acquisition and English linguistics within a cognitive linguistic framework.

Henning Wode is a professor emeritus at the English Department of Kiel University, Germany. A large part of his work has been concerned with the psycholinguistics of language acquisition including L1, L2, re-acquisition, and foreign language teaching. Amongst other things, he figures among the pioneers who established L2 acquisition research as a scientific discipline during the early 1970s. Since the 1990s he has been very much engaged in introducing immersion teaching in Germany by adapting Canadian immersion to the German/European scenario.

Without the tireless support of our editorial assistant Clare Wright, who juggled her Newcastle University PhD, you would not be holding this book in your hands.

Introduction

Considering the Matters of Why and How Input Matters

That INPUT¹ matters comes as no surprise to second language practitioners, but the issue of exactly how input affects SECOND LANGUAGE ACQUISITION (SLA) is another matter. Second language acquisition researchers who see the SECOND LANGUAGE LEARNER as capable of unconsciously converting what is heard into a linguistic system take it for granted: as long there is input, acquisition will occur. One of the aims of this chapter is to elucidate the place of input in current SLA research. An ancillary aim is to provide to the outside observer a general account of the state of the art with respect to SLA research, in particular its relation to the classroom and the second language teacher.

Let us start with a central issue that remains unresolved in research circles. We know from casual observation as well as systematic research that under normal circumstances the route of development in both first and second language acquisition does not vary nearly as much as rate of development. When we consider the END STATE of second language acquisition, variation is rife, particularly among those individuals who begin to learn a second language after childhood. One learner might end up indistinguishable from a NATIVE SPEAKER, whereas another who has spent just as long in that country might demonstrate only basic oral proficiency. For those researchers who maintain that second language acquisition is driven by innate linguistic mechanisms, mere exposure to input from other speakers is all that is necessary for acquisition to take place. When the focus is on internal linguistic properties, little attention is paid to the possibility that variation in external factors such as input might influence anything, apart perhaps from rate (when there is a meager amount of input, for example). Authors represented in this book both consider whether input matters with respect to route and end state, as well as look at some highly specific matters relating to input.

Despite decades of research into the cognitive, psycho-social and environmental factors responsible for the variation observed in second language acquisition, surprisingly little can be stated conclusively. When it comes to the specific environmental factor with which this book is concerned, namely *INPUT*, we cannot easily point to just what in the language the learner hears influences rate, route or end state. It is therefore useful to step back and consider from a variety of perspectives what we do know about input. The next 13 chapters build on the reader's basic knowledge about second language acquisition, converting this knowledge into specific expectations about learners, but always in relation to input. These expectations apply to learners whose exposure to a second language is not predigested through explanation of grammar or error correction or manipulated through form-focused exercises, drills and memorization. Reports by a range of established and up-and-coming researchers about their own work results in a reader's tour through fertile terrain where the guiding thread is second language input the learner receives.

A vast amount of published information on second language acquisition is now widely available; rather than competing for shelf space with the numerous high-quality overviews of second language acquisition that have appeared in textbook, handbook and encyclopedia form, our edited volume is intended to complement such books. Familiarity with any one of these will help in two ways. First, knowledge of SLA research is useful for making sense of much of what will be discussed in the 13 subsequent chapters. Second, knowledge of SLA is the starting point in an exploration of the influence of input. Unless you are an active researcher, you probably struggle to make sense of current reports of studies which treat abstract linguistic issues. If your only contact with SLA research occurred (or is occurring) while fulfilling degree requirements (and you were not drawn into the world of research), you likely find current publications inaccessible, particularly compared to those written three or four decades ago. For reasons we will detail below, many SLA researchers are nowadays far less concerned with pedagogical relevance than was the case 40 years ago, and where information from researchers to non-researchers once flowed freely, there is often now but a trickle. The expansion of research in SLA has also resulted in a parallel increase in specialised terminology. Although such terms will be elaborated on in the text in which they appear in this volume, we nonetheless include a glossary at the back of the book. You may have already noticed the terms and abbreviations that appear in *SMALL CAPS*. These are made salient in this manner upon first use in the book, and each term is defined in the glossary as understood by the contributors in the context of their chapters.

To make best use of this book, a grasp of the basics of SLA research is essential. We assume the introductory level of knowledge gained from Lightbown and Spada (2006), but as a send-off on your tour, we provide

you with a brief (re-)orientation in this chapter. We will also make explicit the conceptual underpinnings of those comprehension methods of teaching whose aim is to simply provide the second language learner with everyday, unadulterated input.

Theory and Practice

Those who work on first or second language acquisition would readily agree that these are truly exciting times in research. Humans are intensely curious about what *Homo sapiens* excels at; that is, language. Since the early 1980s there has been a worldwide explosion of formal linguistics-based research which addresses the issue of how the human mind represents and constructs linguistic COMPETENCE. But, as with any line of inquiry into the mind, researchers have not always been in agreement, and if one probes further, one finds that ideas on how humans develop language have differed not only for decades but at least for centuries. In recent history, views on human language began to diverge in the 1950s when Noam Chomsky first challenged prevailing opinion, arguing that rather than the product of interaction with the environment, as claimed by the Behaviorists and Piagetians, human language is the product of an innate faculty for language. On the language side of things, Chomsky went beyond the traditional description and classification of languages where he and his followers adopted the aim of accounting for the native speaker's unconscious linguistic knowledge along with explaining how that knowledge is acquired.

This dual aim is not necessarily the aim of all those who study language acquisition. Several decades ago Lightbown and White (1987: 483) pointed to the situation that has persisted over the last 50 years where 'the relationship between linguistics and acquisition research has at times been very close and at other times practically nonexistent'. The same holds for the relationship between linguistics and pedagogy. In the early 1970s, Diller (1971: 5) expressed his scepticism about pedagogical developments, noting that it was historically not the case that 'the faults of one method were corrected by a new method'. Yet surprisingly, that same decade marks the heyday of the confluence of formal linguistics and second language pedagogy. From the mid-1960s into the 1970s fresh ideas about the latter were developing in relation to new directions in the former. At the time, Chomsky's talk at the 1966 Northeast Language Teachers' Association was only the most recent example of the traditional partnership between linguists and language teachers. In the early 20th century this included such luminaries as Leonard Bloomfield (1942), Dwight Bolinger (1960) and Otto Jespersen (1904), and centuries ago thinkers such as Comenius (1654) who in the 17th century advocated use of aural input and pictures to teach Czech, German, Hungarian and Latin.
