

Lexical Errors and Accuracy in Foreign Language Writing

SECOND LANGUAGE ACQUISITION

Series Editor: Professor David Singleton, *Trinity College, Dublin, Ireland*

This series brings together titles dealing with a variety of aspects of language acquisition and processing in situations where a language or languages other than the native language is involved. Second language is thus interpreted in its broadest possible sense. The volumes included in the series all offer in their different ways, on the one hand, exposition and discussion of empirical findings and, on the other, some degree of theoretical reflection. In this latter connection, no particular theoretical stance is privileged in the series; nor is any relevant perspective – sociolinguistic, psycholinguistic, neurolinguistic, etc. – deemed out of place. The intended readership of the series includes final-year undergraduates working on second language acquisition projects, postgraduate students involved in second language acquisition research, and researchers and teachers in general whose interests include a second language acquisition component.

Full details of all the books in this series and of all our other publications can be found on <http://www.multilingual-matters.com>, or by writing to Multilingual Matters, St Nicholas House, 31–34 High Street, Bristol BS1 2AW, UK.

Acknowledgements

Many people have made valuable contributions to the process of writing this work. First and foremost, I thank Prof Dr David Singleton for his help and insightful comments on the original proposal of this book and for his keen interest in this research. Without his support this would have never been possible. I also express my thanks to the editorial staff of Multilingual Matters, especially to Anna Roderick for her kind mails and ready help.

I am very much indebted to Dr Diana Carter for her help with the language of an earlier version of this work, and especially to Amanda McCaughren Morris for her proofreading of the manuscript, her suggestions, her comments and her assistance in linguistic matters. I am also very grateful to the mathematician and lecturer at the Universidad De la Rioja, Montserrat San Martín Pérez, for her support and advice with statistics.

I offer my sincere gratitude to the reviewer of the manuscript who provided me with very interesting, perspicacious and intelligent comments and suggestions, which have largely improved the quality of the book.

I am especially and deeply grateful to Prof Dr Francisco José Ruiz de Mendoza Ibañez for his generous help and his support and kind treatment.

At an institutional level my thanks are due to the *Comunidad Autónoma de La Rioja* and the *Universidad de La Rioja* for financial and institutional support through the GLAUR group (glaur.unirioja.es). I also acknowledge my debt to the Department of Modern Languages of the *Universidad de La Rioja* and its academic and administration staff for their help and support. I am also indebted to the *Ministerio de Educacion y Ciencia* for its financial support through the research projects (grant nos. BFF2003-04009-C02-02 and HUM2006-09775-C02-02).

Finally, I most warmly thank Dr Rosa María Jiménez Catalán, who has shown her usual generosity in assisting me all throughout my academic life and has always offered me her clear-sighted and generous guidance.

Every effort has been made to trace and acknowledge all sources, but I apologise to those whom I may have inadvertently missed. I am also aware that despite the help and assistance received from the people and institutions above, the work is far from perfect. Any faults and failings are my sole responsibility.

Introduction: An Outline

The past decades have seen a noteworthy increase in research about vocabulary and vocabulary-related issues.* The observation that vocabulary is central to language development has promoted this increase in research studies in the lexical field. Several reasons account for this (James, 1998: 143–144). Firstly, the boundaries between grammar and lexis are now seen as more blurred than assumed. Lexis is inextricably intertwined with the other linguistic systems. The study of language from various perspectives, phonology, syntax, morphology, semantics and pragmatics, has the word as its central and definitional element (cf. Singleton, 2000: Chap. 1). Secondly, learners consider vocabulary as the most important aspect of language, thus equating language learning with vocabulary learning. We agree in this sense with Singleton (2000: 12) that ‘language is popularly conceived in terms of words’. In addition, lexical errors have been found to be the most numerous in many different research studies. Furthermore, they have been judged as the most serious category of errors. Finally, we have to highlight the functional role of vocabulary as a crucial aspect in communication and language assessment, especially in writing assessment. If knowledge of vocabulary is at hand, then communication is possible even though no grammar knowledge exists. It then becomes significant for language teaching and learning.

Lexical errors have also occupied researchers in second language acquisition (SLA) and teaching in recent years. In all, research on lexical errors as the central issue is not very abundant as compared with research on general vocabulary matters. Especially scarce are studies with primary school graders. Longitudinal studies on the development of the lexicon examined through the light of lexical errors are also almost non-existent. Moreover, most studies that deal with lexical errors have mainly addressed the description and classification of these lexical errors

* This study is part of the research projects: FFI2010-19334, BFF2003-04009-C02-02 and HUM2006-09775-C02-02.

and the field is in need of studies that explore the role of lexical errors in writing assessment, lexical knowledge and L2 vocabulary acquisition.

In most teaching situations a frequent appearance of errors is considered as a failure either in the process of learning or in the process of teaching. However, focusing on errors can provide very telling and informative insights regarding the process of SLA. Finding out the what, why and when of lexical errors can be very valuable and useful in determining how to remedy them and get a successful performance (Ellis, 1997b: 15). More specifically, lexical errors can serve to indicate L2 writing ability and vocabulary knowledge. The need to establish objective and reliable measures and criteria to evaluate the writing competence of learners in the L2 calls for the examination of the role of lexical errors in this issue.

Ignorance or imperfect knowledge of lexical items leads to errors. The notion of error has changed from a negative view to a positive one as an inevitable phenomenon in the process of SLA. It helps us to understand how language acquisition proceeds and where it does not proceed smoothly, what stages it goes through, what processes are at stake, and in particular, at which moment of acquisition the learner is. Errors put forward any possible methodological shortcoming and any problematic learning area, so that EA should precede any pedagogical design. Furthermore, lexical errors shed light on the structure of the L2 lexicon, just as L1 errors are indicative of the properties of the L1 lexical store (Laufer, 1991a: 321). Finally, learners can learn from their errors by spotting problematic L2 areas where they need more practice.

There is enough evidence to assume lexical errors to be important predictors of writing quality, relevant measures of lexical knowledge and crucial insights into the vocabulary acquisition process. Writing is a very difficult skill for any language user, particularly for non-native learners; so lexical errors are numerous. Evaluation of the writing process and written products of learners is an arduous task, and objective measures of writing quality are needed that facilitate and quicken this writing evaluation. Vocabulary has proven to be crucial in establishing writing quality. Likewise, lexical errors have been shown to be important composition assessment criteria and quality predictors. The quality of interlanguage performance is generally assessed in terms of communicability, so that if an utterance communicates well, its quality will be assessed positively. Considering this, the more lexical errors a text displays, the less is its communicability and, therefore, the lower is its quality (Engber, 1995).

Hence, this book focuses primarily on lexical error production of young Spanish learners over two years from fourth to sixth grade. It aims at exploring the development of the participants' written production and vocabulary knowledge through the observation of lexical errors. By examining the mechanisms that explain lexical errors we can start discovering the processes that are activated in lexical acquisition.

Considering the methodology of analysis and the types of objectives pursued by the investigation, the study presented in this book is framed into EA and the field of lexical SLA. The main merit of our research concerns the correlation between lexical error and essay score, which, if finally found, will provide with objective criteria for evaluation and clues about what to concentrate teaching on. For learners the findings are important since they could be shown what they have to pay more attention to when writing.

This investigation claims novelty for its approach to the study of lexical acquisition from lexical errors. Moreover, this study is original and novel, because although it is framed within the traditional EA methodology, its perspective is new. This study uses EA and lexical errors as an instrument to assess, valuate and measure other language constructs such as writing ability and receptive vocabulary knowledge.

This book is divided into two main parts. The first part provides the theoretical background to the second, which is an original empirical study. Chapter 1 looks at the process of L2 vocabulary acquisition, and Chapter 2 examines some of the variables which affect lexical (error) production, concentrating basically on proficiency level and vocabulary size. In Chapter 3, the relationship between writing assessment and vocabulary is examined. Chapter 4 gives a critical review of previous research on lexical errors. The second part of the book reports on an original study, which relates lexical errors, writing assessment and receptive word knowledge. Individual chapters are devoted to explaining the method, the changes in lexical error production over time, the role of lexical errors in writing quality and their relationship with receptive vocabulary size. Finally, implications for practice, limitations and suggestions for further research are discussed.
